	<i>All</i>	<i>Male</i>	<i>Female</i>
Valid responses	1,094	664	330
Mean (£)	57,691	60,850	53,230
Median (£)	45,000	49,000	40,000
Coefficient of Variation (%)*	94.5	96.0	92.3
GINI COEFFICIENT	0.41		

*The coefficient of variation is a measure of relative dispersion, calculated by expressing the standard deviation as a percentage of the mean. In all tables, means marked with an asterisk may be unreliable as estimates of the true population means because of the small number of valid responses relative to the coefficient of variation.

¹ The tables in Chapters 7 and 8 are marked in matching numbers, for ease of reference. Thus, UK table 7.37 (Household income audio-visual authors 2004-5) corresponds to German table 8.37 (Household income audio-visual authors 2005). This system required omitting some successive numbers, as for example there is no corresponding German category to the UK public lending right (in Germany, PLR income is processed by VG Wort, see Chapter 4.4).

*Professional authors are those who have been coded as authors, audio-visual authors, journalists or translators/linguists because they allocate more than 50% of their time to one of these professions. Of our eight categories, this excludes those writers who describe themselves primarily as academics, teachers, other professionals or retired.
